Agenda Item 10

MEETING DATE: February 18, 2026

SUBJECT: Portfolio Allocation and Rebalancing Report—Fourth Quarter 2025

SUBMITTED FOR: Action Information

RECOMMENDATION

Receive and file the Portfolio Allocation and Rebalancing Report for the quarter ended December 31, 2025.

PURPOSE/STRATEGIC PRIORITY

This item complies with the SCERS Master Investment Policy Statement reporting requirements related to the review of SCERS' current asset allocation as it compares to established targets and ranges, and physical and Overlay Program rebalancing activity that occurred during the quarter.

SUMMARY

SCERS employs an Overlay Program, which is managed by State Street Global Advisors (SSGA), to rebalance the asset allocation to policy targets and also invest available cash, in a manner which replicates SCERS' policy target strategic asset allocation.

Below is a summary of SCERS' asset category and asset class positioning relative to the target allocations as of December 31, 2025 (based on State Street market values, which can differ from those of SCERS' investment consultants). The comparisons to the benchmark allocations below, and throughout the memo, are made in two formats: (1) the difference between the actual and target allocation, and (2) the percentage amount of the actual allocation relative to the target allocation.

<u>Asset Category</u>	<u>Asset Class</u>	<u>Current Allocation</u>	<u>Target Allocation</u>	<u>Difference</u>	<u>% Relative to Target</u>
GROWTH*		59.5%	59.0%	0.5%	101%
	Global Equity	42.6%	39.0%	3.6%	109%
	Private Equity	11.6%	11.0%	0.6%	105%
	Credit	5.3%	9.0%	-3.7%	59%
	Growth Absolute Return	0.03%	0.0%	0.0%	N/A
DIVERSIFYING*		22.8%	25.0%	-2.2%	91%
	Fixed Income	14.3%	16.0%	-1.7%	89%
	Absolute Return	6.7%	7.0%	-0.3%	96%
	Dedicated Cash	1.8%	2.0%	-0.2%	89%
REAL RETURN**		16.2%	16.0%	0.2%	101%
	Real Estate	6.0%	8.0%	-2.0%	75%
	Real Assets	8.3%	7.0%	1.3%	118%
	Liquid Real Return	1.9%	1.0%	0.9%	190%
OTHER CASH/OVERLAY		1.5%	-	-	N/A

* Growth and Diversifying allocation weights do not include overlay proxy exposures, which are included in the Overlay allocation

** Real Return allocation includes overlay proxy exposures

During the fourth quarter of 2025, the following Overlay Program rebalancing occurred:

- Quarter-end rebalance:
 - Sold \$28 million in Growth proxy
 - Purchased \$39 million in Diversifying proxy
 - No change to the Real Return proxy
 - Decreased the cash allocation by \$11 million

Key current portfolio allocations relative to targets, and physical rebalancing considerations include:

- **Global Equity** has a 42.6% allocation as of December 31, 2025, down from a 40.8% allocation as of September 30, 2025, and above the 39% target allocation. As part of the revised strategic asset allocation, the Global Equity target allocation reduced from 40% to 39%.
 - **Domestic Equity** has a 22.3% allocation as of December 31, 2025, up slightly from the 22.1% allocation as of September 30, 2025. The 22.3% allocation is above the range high of 21%.
 - **International Equity** has a 15.6% allocation as of December 31, 2025, up from the 14.9% allocation as of September 30, 2025. The 15.6% allocation is above the 14% target allocation but below the range high of 16%.
 - **Global/Unconstrained** has a 4.7% allocation as of December 31, 2025, up from the 3.8% allocation as of September 30, 2025. The 4.7% allocation is below the 6% target allocation but above the range low of 4%.
 - In January, Staff performed physical rebalancing within the Domestic Equity sub-asset class to reduce the overweight while also moving toward the new Global Equity target allocation of 39% and the recently revised sub-asset class targets.

- **Fixed Income** has a 14.3% allocation as of December 31, 2025, down slightly from a 14.6% allocation as of September 30, 2025. The 14.3% allocation is below the 16% target allocation, but within range.
- **Alternative Asset Class** weights vs. target include:
 - **Absolute Return** – 6.7% vs. 7.0% target; within range
 - **Private Equity** – 11.6% vs. 11.0% target; within range
 - **Credit** – 5.3% vs. 9% target; below the 6% lower bound of the newly established Credit asset-class range, which was established when Public and Private Credit were consolidated and the target increased from 7% to 9%
 - **Real Assets** – 8.3% vs. 7.0% target; within range
 - **Real Estate** – 6.0% vs. 8.0% target; within range of the revised 8% target

BACKGROUND

The Overlay Program rebalances the asset allocation to policy targets and minimizes the risk that SCERS falls short of achieving its targeted return due to the asset allocation straying from policy target ranges. The Overlay Program also invests available cash, including: (1) unallocated cash; (2) the cash balances in manager portfolios; and (3) cash held for previously committed to, but un-invested private market investments, in a manner which replicates SCERS’ policy target strategic asset allocation. The Overlay Program does not invest the 2% dedicated cash allocation.

While SCERS’ Overlay Program reduces the need for physical rebalancing, it does not eliminate it, as there are circumstances whereby physical rebalancing would be a better solution compared to the Overlay Program, including when there is a persistently large difference between physical assets and the target allocation.

While physical rebalancing typically costs more to execute compared to the Overlay Program, it remains important to assess whether SCERS’ portfolio is at a point where physical rebalancing warrants greater consideration.

The Overlay Program structure replicates SCERS’ asset category targets (Growth; Diversifying; Real Return), with bands around these targets (see below). The rebalancing methodology that SSGA utilizes is quarterly rebalancing with bands, where rebalancing occurs on a quarterly basis (at the end of a quarter), unless the bands are breached on an intra-quarter basis, in which case rebalancing occurs upon the breach of a band. The Overlay targets and bands shown below were adjusted in the third quarter of 2025 in line with the revised strategic asset allocation.

Asset Category	Minimum Allocation (%)	Target Allocation (%)	Maximum Allocation (%)
Growth	54	59	64
Diversifying	22	25	28
Cash	0	2	3
Real Return	14	16	18

Each asset category has a separate overlay proxy, which contains a mixture of investments that attempt to replicate the objectives and exposures of the asset category and the underlying asset classes within the asset category, in order to minimize tracking error and costs.

The underlying components of each asset category overlay proxy are shown within Appendix B of this report.

Because SCERS' Overlay Program rebalances SCERS' total fund, it is important to note that **Tables 1-14** in Appendix A refer only to physical holdings compared to policy targets, and not the exposures provided through the Overlay Program. The exception is Table 10 (Real Return asset category exposure), which includes the SSGA Real Return Strategy within the Liquid Real Return asset class, which is the Overlay proxy for this asset category, and is implemented through physical exposures (commingled funds).

SCERS' investment staff and general investment consultant Verus monitor the asset allocation on a quarterly basis and update the Board if the asset allocation moves outside of policy ranges and conditions warrant physical rebalancing.

FULL PORTFOLIO REVIEW

GROWTH ASSET CATEGORY:

The Growth asset category is comprised of the Global Equity, Private Equity, and Credit segments of the portfolio. The Growth Absolute Return segment was eliminated from the SAA and is close to being wound down. As outlined in **Table 1 of Appendix A**, the Growth asset category currently has an allocation of 59.5%, which is slightly above the strategic asset allocation's target of 59% but within range, and the allocation is 101% relative to the target allocation. At a more granular level, the Global Equity and Private Equity exposures are above target while the Credit asset class is below target.

The Overlay Program rebalances the Growth asset category to the 59% target allocation by purchasing or selling global equity futures to bring the Global Equity asset class to its target allocation and then adjusts the remainder of the asset category by using a combination of 88% global equity futures and 12% U.S. Treasury futures.

At the end of the quarter, SCERS' overlay manager, SSGA, sold approximately \$28 million of overlay growth proxy exposure to rebalance the Growth asset category to its target allocation.

Global Equities:

As outlined in **Table 2**, SCERS' Global Equity asset class, which includes the sub-asset classes of Domestic Equity, International Equity, and Global/Unconstrained Equity, has an actual weighting of 42.6%, which is above SCERS' policy target allocation of 39%, but within range, and the allocation is 109% relative to the target allocation.

At the sub-asset class level, Domestic Equity has an actual allocation of 22.3%, which is above its target allocation of 19% and above the range high of 21% (117% relative to the target).

International Equity has an actual allocation of 15.6%, which is above the target allocation of 14% but within range (112% relative to the target). SCERS liquidated an international large cap developed equity mandate during the prior quarter.

The Global/Unconstrained segment has a 4.7% allocation, which is below the 6% target allocation but within range (78% relative to target). Funding during October fulfilled the Board approved investment amount of \$250 million for this segment.

SSGA buys and sells a basket of global equity index futures to rebalance the Global Equity asset class toward the policy target allocation. In January, Staff performed physical rebalancing within the Domestic Equity sub-asset class to reduce the overweight while also moving toward the new Global Equity target allocation of 39% and the recently revised sub-asset class targets.

Private Equity:

As outlined in **Table 3**, SCERS' Private Equity allocation of 11.6% remains above the target allocation of 11%, but within range. The allocation is 105% relative to the target allocation.

SSGA utilizes a basket of 88% global equities and 12% U.S. Treasuries to replicate Private Equity, as part of a broader non-public equity proxy within the Growth asset category.

Credit:

As outlined in **Table 4**, SCERS' Credit allocation of 5.3% is below the policy target allocation of 9%, and the allocation is 59% relative to the target allocation. As part of the revised strategic asset allocation, the Public Credit and Private Credit asset classes consolidated into a single Credit asset class with a target allocation of 9%, an increase of 2% over the prior consolidated target of 7%.

Illiquid credit valuations are lagged a quarter. SCERS was on a path toward building out the prior 5% allocation to Private Credit and was expected to reach the target by year end 2027, while the prior 2% Public Credit allocation was fully allocated. With the increase in the overall Credit asset class from 7% to 9%, Cliffwater modeled the forecasted investment pace of the asset class over a 10-year period, and projects that SCERS will reach the new 9% target allocation by 2031.

SSGA utilizes a basket of 88% global equities and 12% U.S. Treasuries to replicate Credit, as part of a broader non-public equity proxy within the Growth asset category.

Growth Absolute Return:

As outlined in **Table 5**, SCERS' Growth Absolute Return portfolio has a current allocation of 0.03%. The Growth Absolute Return Portfolio was eliminated from the revised SAA, and SCERS

has nearly unwound the exposures within this portfolio. The small remaining allocation is expected to be unwound in 2026.

DIVERSIFYING ASSET CATEGORY:

The Diversifying asset category is comprised of the Fixed Income and Absolute Return segments of the portfolio, as well as the dedicated cash allocation. As outlined in **Table 6**, the Diversifying asset category currently has an allocation of 22.8%, which is below the strategic asset allocation's target of 25%, and the allocation is 91% relative to the target allocation.

The Overlay Program rebalances the Diversifying asset category to the target allocation by purchasing or selling U.S. government bond futures.

At the end of the quarter, SCERS' overlay manager, SSGA, purchased approximately \$39 million of Diversifying asset category proxy exposure to rebalance the Diversifying asset category to its target allocation.

Fixed Income:

As outlined in **Table 7**, SCERS' Fixed Income allocation of 14.3% is below SCERS' policy target allocation of 16%, and the allocation is 89% relative to the target allocation.

The Overlay Program utilizes a combination of U.S. Treasury futures and Mortgage TBAs to rebalance this segment of the portfolio to its policy target allocation, as part of a broader Diversifying asset category proxy.

Absolute Return:

As outlined in **Table 8**, SCERS' Absolute Return allocation of 6.7% is slightly below the policy target allocation of 7%, and the allocation is 96% relative to the target allocation.

SSGA utilizes a combination of U.S. Treasury futures and Mortgage TBAs to rebalance this segment of the portfolio to its policy target allocation, as part of a broader Diversifying asset category proxy. Staff performed physical rebalancing during the quarter by making partial redemptions from three Absolute Return funds totaling \$50 million to adjust portfolio exposures and create additional capacity for future investment.

REAL RETURN ASSET CATEGORY:

The Real Return asset category is comprised of the Real Estate, Real Assets, and Liquid Real Return segments of the portfolio. As outlined below in **Table 10**, the Real Return asset category currently has an allocation of 16.2%, which is slightly above the strategic asset allocation's target of 16%, and the allocation is 101% relative to the target allocation.

The Overlay Program rebalances the Real Return asset category to the 16% target allocation through the SSGA real return overlay proxy, by purchasing or selling a series of commingled funds across global REITs, global infrastructure stocks, global natural resource stocks, commodities, U.S. TIPS, and floating rate notes.

At the end of the quarter, SCERS' overlay manager, SSGA, did not make any trades within the Real Return asset category proxy.

Real Estate:

As outlined in **Table 11**, SCERS' Real Estate allocation of 6% is below the policy target allocation of 8%, and just above the range low. The allocation is 75% relative to the target allocation. As part of the revised strategic asset allocation, the Real Estate asset class target allocation reduced from 9% to 8%.

SSGA utilizes a series of listed commingled funds described above to replicate Real Estate, as part of the broader Real Return asset category proxy.

Real Assets:

As outlined in **Table 12**, SCERS' Real Assets allocation of 8.3% is above the policy target allocation of 7%, and the allocation is 118% relative to the target allocation. Private real asset valuations are lagged a quarter.

SSGA utilizes a series of listed commingled funds described above to replicate Real Assets, as part of the broader Real Return asset category proxy.

Liquid Real Return:

As outlined in **Table 13**, SCERS' Liquid Real Return allocation of 1.9% is above the policy target allocation of 1%, and the allocation is 190% relative to the target allocation. The Liquid Real Return allocation is managed by State Street Global Advisors (SSGA), and functions as part strategic mandate and part overlay program proxy for the Real Return asset category. The latter is used to adjust broad Real Return asset category exposures during quarterly overlay rebalancing, and accounts for the slight overweight to the segment.

CASH:

As outlined in **Tables 9 and 14**, SCERS' total cash balance is approximately 2.9% as of December 31, 2025, which includes a combination of the 1.8% dedicated cash allocation and 1.1% in other cash. The dedicated cash allocation of 1.8% is 89% relative to the 2% target allocation.

The dedicated cash allocation is intended to close the gap between benefit payments and total contributions in an environment where investment earnings fall short of the targeted assumed rate of return, and also serves as a liquidity buffer.

Most of the 1.1% other cash allocation incorporates the 2025/2026 pre-funded annual employer contribution, which was received in July of 2025. The other cash allocation is also used to fund capital calls within the private market segments of the portfolio, and other implementation and rebalancing activity. SCERS' Overlay Program rebalances the portfolio by eliminating cash drag by investing the non-dedicated cash allocation (1.1%) into positions that replicate SCERS' target portfolio.
